## Text2RDF Possibilities

### end-to-end tools

vs.

- × FRED → not accessible
- × OpenIE → very limited
- × Protegé *Addons + API* → ?

### text to triples...

Nocino is a cat → (Nocino; is; cat)

deepex → SotA, Sep 2021

### ...and triples to RDF

NER + string matching

## Text2RDF

### Previously:

- × FRED → missing resource
- × Basic Custom-made Script → underperforming
- ✓ OpenIE<sup>1</sup> [1] → currently working, very basic

### Currently:

*Dual system:*

- ✓ Neural Approaches → implemented
- +
- ... Ontology population via NER and string matching → implementation in progress

---

<sup>1</sup>OpenIE python wrapper [2]: <https://github.com/philipperemy/Stanford-OpenIE-Python>

## Reasoner

- *Output*: number of inconsistent classes
- Complexity: SPARQL is PSPACE-complete
  - import .ttl entities via Virtuoso<sup>2</sup>
  - use only classes without entities

---

<sup>2</sup>high-performance object-relational SQL database [3]

## Evaluator

- *Output:*
  - % of inconsistent classes/entities over total
  - name of inconsistent classes
  - [other info for algo transparency]

# Table of Contents

- 1 Overview

# Table of Contents

- 1 Overview
- 2 Knowledge Base Module
- 3 Ensemble
- 4 Next Steps**

# Next steps

Fine-tune the **thresholds** for features and cross-checking

Try the algorithm on a new **dataset**

Implement other **ensemble** methods

Finish the implementation of the **ontology population** script

Load **entities from .ttl** to a graph

Connect **back-end to front-end**
